All-Weather Refrigerated Bases

Stands up to environmental extremes.

Built Better from the Top Down!

- Durable construction provides superior corrosion and UV resistance
- Top mounted compressor is away from standing water, rodents and heavy corrosive gases found at floor level; heat from the compressor is dissipated in to the air, not in to the sample compartment
- Accurate temperatures are assured with microprocessor thermal control system, not simply a “warmer” “colder” dial
- Lockable controller compartment prevents program tampering
- Mechanical door latch with compressible gasket ensures positive seal, even with wide temperature fluctuations
- Lip overhangs door seal, preventing precipitation from entering sample containers

The Name “All Weather” is No Exaggeration

- Designed to operate anywhere—indoors or out—without a secondary enclosure
- Leveling feet accommodate uneven surfaces
- Factory installed controller compartment heater option for operation in temperatures from -40 to 120°F
- Lockable lid protects pump tubing
- Sidewall ventilation system allows positioning against a wall

Dipper Refrigerated Sampler

“Dipper” Automatic Liquid Sampler provides superior solids handling.

- Dipping action of the Sigma 1600 simulates grab sample collection
- Once the liquid in the flow-through chamber is well mixed and turbulent, the dipper arm passes through the full cross section of the flow
- Good mixing prevents solids from settling and assures representative and repeatable samples
- 2-inch sample inlet can accommodate larger particulates without plugging

The 1600 can be conveniently located where pumps or gravity can deliver a wastewater stream from each stage of the treatment process.
